

## QUARTERLY PROGRESS REPORT

January 1, 2014 to March 31, 2014

This pooled fund enables FHWA to distribute the most recent version of the Surface Water Modeling System, SMS Version 11.1, to all state DOTs. In this period a total of 33 licenses were distributed to 20 states.

The beta version of SMS 11.2 with the SRH-2D interface was made available during this period. The interface works with the current version of SRH-2D but does not yet include the new hydraulic structures. Additional licenses for SMS 11.2 have been issued to states upon request. Six states have already begun using SRH-2D with very positive feedback.
